

Insect Screen

## Clear Advantage

The ultimate screen for achieving better visibility without compromising durability

### Product Overview

This nearly invisible insect screen allows more natural light in and improves airflow. The charcoal color, coupled with the finer mesh weave, reflects less light, creating a lower glare to make the product less visible and enhance curb appeal. This lightweight screen has the same easy installation and weathering benefits as standard fiberglass screening.

### Benefits

- Designed to allow more natural light and improved airflow
- Finer mesh and weave provide greater insect protection than a standard screen; keeping bugs out
- Durable PVC coated fiberglass screen mesh creates a long-lasting window screen that you can enjoy for years
