

Glass fibre wall covering absorbing formaldehyde

The solution that improves indoor air quality

Improving air quality, a priority for those with particular sensitivities

After **the renovation** of a building or a room, the **indoor air quality can deteriorate considerably**: the content of formaldehyde can exceed the authorised limit of $100 \mu\text{g}/\text{m}^3$ ⁽¹⁾.

Formaldehyde is a **harmful VOC** ⁽²⁾:

• **At low exposure**, it can cause **headaches, irritation, asthma, nausea & discomfort**.

These ailments are even more important to those with particular sensitivities: babies, the old or the sick.

• **At high exposure**, formaldehyde is **carcinogenic** (class 1 according to International Research Center on Cancer).

This organic component is mainly **released by laminated furniture, new floor coverings, some paints or glues**.

How to bring down the formaldehyde rate immediately and sustainably?

⁽¹⁾ Authorized line defined by WHO - ⁽²⁾ Volatile Organic component

Novelio® CleanAir provides the solution with a high-performance product

70% of formaldehyde captured as soon as applied

- Effective even after several layers of paint
- Absorption is permanent

A decorative, soft and hard wearing to impact wall covering as are all products in the Novelio® range

- Reinforces delicate surfaces
- Resists abrasion and impact
- Covers all cracks

CleanAir principle

How does it work?

CleanAir wall covering is coated with a **special patented formulation**, developed by Saint-Gobain research and development team.

This formulation attracts and **traps formaldehyde**, the active ingredient works for more than 10 years.

CleanAir **works even after several layers of paint**: paint is porous and lets the formaldehyde penetrate.

Once trapped, the formaldehyde is no longer harmful to health and the active wall covering is **not dangerous**.

CleanAir efficiency

Novelio® CleanAir action

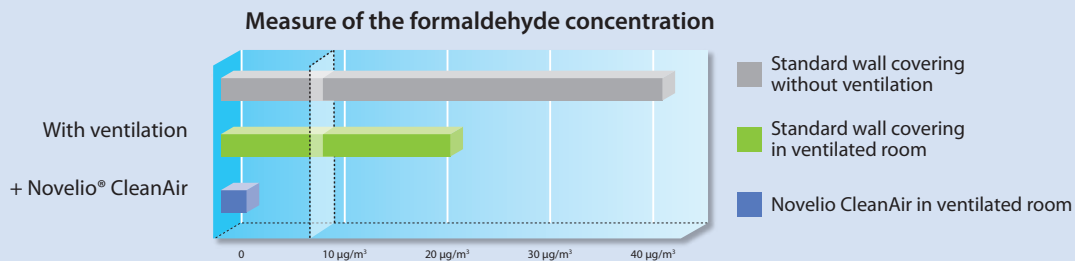

Tests Field tests, SGR / APAVE

⁽³⁾ Results available on request

The efficiency of the active ingredient has been tested both in laboratory and in normal conditions with same results: **70% absorption, permanently captured** ⁽³⁾.

A benchmark study was made in a room of a French nursery: **the CleanAir principle was confirmed and linked directly to its special formulation.**
